Ebrar Dushullovci

Senior Full-Stack Software Engineer

Remote from Prishtina, Kosovo (CET/CEST)
ebrar.dushullovci@gmail.com | ebrar-dushullovci.netlify.app
github.com/ebrardushullovcii | linkedin.com/in/ebrar-dushullovci

Senior full-stack engineer (TypeScript, React/Next.js, Node.js, C#/.NET) leading teams of 3-5 across product delivery, QA automation and frontend generation.
Experience since 2019 includes Orderific (serving thousands of restaurants), internal engineering tools, and business software for around 1,000 client businesses.

Experience

AutomatedPros

Orderific restaurant platform and internal engineering tools | Remote

Senior Full-Stack Software Engineer Jul 2023 - Present

TypeScript, React, Next.js, Node.js, REST APIs, WebSockets

- **Engineering leadership:** Led 3-5 engineers across projects, covering architecture, code reviews and delivery.
- **QA platform (TestingMill):** Proposed and led an internal end-to-end testing platform adopted team-wide by about 20 developers and 5-10 QA staff. Built most of its backend: API-based test templates and datasets, batch runs, streamed results and failure tickets. Cut regression runs from days to hours.
- **Orderific:** Delivered ordering and kitchen-display workflows for a platform serving thousands of restaurants; tickets reached kitchens in under a second. Redesigned tablet flows raised staff task completion from 83% to 98% in usability tests.
- **Customer research (both Orderific roles):** Visited prospective restaurants in Dubai and found kitchen-screen controls too small for chefs on touchscreens, which fed into later kitchen UI changes.
- **Integrations:** Built reusable delivery and payment integration adapters, cutting new-integration effort by about 40%.
- **Frontend generation:** Built the Figma-to-React/Next.js generation stage with a small team inside a Laravel-orchestrated pipeline, roughly halving delivery time for design-heavy pages.
- **Architecture:** Worked with the team to rewrite an Elixir/Phoenix codebase in Node.js because too few engineers could maintain the original stack, making day-to-day development smoother.

Chief Experience Officer - Orderific (AutomatedPros) Nov 2021 - Jul 2023

- Led customer experience and QA for Orderific; grew QA from two to five, selected its tools and translated support and test findings into release priorities. Chose to return to hands-on engineering in July 2023 to focus on building products.

Nordri

Swiss services marketplace | Invite-only user testing

Technical Lead (part-time, concurrent) Aug 2026 - Present

- Sole engineer and product decision owner for web, mobile and admin. Building discovery, bookings, chat and payments with TypeScript, Next.js, Expo/React Native, Convex and Stripe Connect.
- **Payments:** Designed recovery for the gap between Stripe completing an operation and Nordri recording it: webhook events are stored before processing and retried, and payouts reserve a stable operation before calling Stripe, so retries reuse it instead of starting a new payout.

Infotech L.L.C.

Business-management suite for around 1,000 client businesses

.NET Consultant (part-time) Jan 2022 - Aug 2026

- Provided .NET architecture reviews, SQL performance work and production incident support for business-management systems.
- Mentored six junior developers through pairing and written playbooks, reducing onboarding from four weeks to ten days.

.NET Developer Aug 2019 - Jan 2022

- Developed C# desktop business software with WPF, WinForms and SQL Server, covering inventory, sales, tax documents, POS, restaurant orders, repair workshops and fuel-pump control.
- Reduced car-repair parts lookup time from 15 seconds to 2 seconds.
- Led a .NET MVC logistics and delivery web application covering registration, ordering, tracking and database work.

CREA-KO

Junior .NET Developer Jan 2019 - Jul 2019

- Contributed to a team migration of a web ERP from .NET Framework to .NET Core MVC, refactoring frontend and backend code and replacing deprecated dependencies.

Selected projects

ClipVault and ShowTracker were built for personal use; my friends and I have used both daily for months.

ClipVault | Released Windows application | GitHub | Website

Windows game-clipping app with a C++/libobs replay buffer and an Electron/React editor. Separate audio tracks, NVENC/x264 encoding, trimming and FFmpeg export; installer and portable releases on GitHub.

ShowTracker | Live web application | GitHub | Website

TV, anime and movie tracker built with Expo/React Native, TypeScript and Convex. Normalizes four media providers and reconciles episode identities. Compact indexed projections cut data read by about 84% in a 203-title release-sync replay test.

Nestor | In development | GitHub

Electron/React job-search app with typed IPC and resumable Playwright browser workflows, using TypeScript and SQLite.

Technical skills

Development: TypeScript, React/Next.js, Node.js, C#/.NET, Expo/React Native, Electron

Data and integration: SQL Server, PostgreSQL, Convex, REST, WebSockets, SignalR

Quality: Playwright, xUnit, NUnit, CI/CD

Platform: Docker, Linux, NGINX, vLLM, LiteLLM

Education and languages

BSc Computer Science | Riinvest College, Prishtina

English C2 | Albanian native
